About This Guide	xvii
What This Guide Contains	xvii
What's New in This Edition	xx
What You Should Know Before Reading This Guide	xxi
How to Obtain the Sample Code	xxii
Errata	xxiii
Style Conventions	xxiii
Acknowledgments	xxv
Figures	xxix
Tables	xxxiii
Examples	xxxv
1. Introduction to OpenGL	1
What Is OpenGL?	2
A Smidgen of OpenGL Code	5
OpenGL Command Syntax	7
OpenGL as a State Machine	9
OpenGL Rendering Pipeline	10
Display Lists	11
Evaluators	11
Per-Vertex Operations	12
Primitive Assembly	12

Pixel Operations	12
Texture Assembly.....	13
Rasterization.....	13
Fragment Operations.....	13
OpenGL-Related Libraries	14
Include Files	15
GLUT, the OpenGL Utility Toolkit.....	16
Animation	20
The Refresh That Pauses	22
Motion = Redraw + Swap	23
2. State Management and Drawing Geometric Objects	27
A Drawing Survival Kit.....	29
Clearing the Window.....	29
Specifying a Color.....	32
Forcing Completion of Drawing	33
Coordinate System Survival Kit.....	35
Describing Points, Lines, and Polygons	37
What Are Points, Lines, and Polygons?.....	37
Specifying Vertices.....	41
OpenGL Geometric Drawing Primitives.....	42
Basic State Management	48
Displaying Points, Lines, and Polygons	49
Point Details	49
Line Details	50
Polygon Details	55
Normal Vectors.....	63
Vertex Arrays.....	65
Step 1: Enabling Arrays	67
Step 2: Specifying Data for the Arrays	68
Step 3: Dereferencing and Rendering	70
Interleaved Arrays	75
Attribute Groups.....	78
Some Hints for Building Polygonal Models of Surfaces	81
An Example: Building an Icosahedron	83

3. Viewing	91
Overview: The Camera Analogy.....	94
A Simple Example: Drawing a Cube.....	97
General-Purpose Transformation Commands.....	102
Viewing and Modeling Transformations.....	104
Thinking about Transformations.....	105
Modeling Transformations.....	108
Viewing Transformations.....	113
Projection Transformations.....	120
Perspective Projection.....	120
Orthographic Projection.....	124
Viewing Volume Clipping.....	125
Viewport Transformation.....	125
Defining the Viewport.....	126
The Transformed Depth Coordinate.....	128
Troubleshooting Transformations.....	129
Manipulating the Matrix Stacks.....	132
The Modelview Matrix Stack.....	135
The Projection Matrix Stack.....	135
Additional Clipping Planes.....	136
Examples of Composing Several Transformations.....	139
Building a Solar System.....	140
Building an Articulated Robot Arm.....	143
Reversing or Mimicking Transformations.....	147
4. Color	151
Color Perception.....	152
Computer Color.....	154
RGBA versus Color-Index Mode.....	156
RGBA Display Mode.....	157
Color-Index Display Mode.....	159
Choosing between RGBA and Color-Index Mode.....	161
Changing between Display Modes.....	162
Specifying a Color and a Shading Model.....	162
Specifying a Color in RGBA Mode.....	163

Specifying a Color in Color-Index Mode.....	164
Specifying a Shading Model	165
5. Lighting	169
A Hidden-Surface Removal Survival Kit	171
Real-World and OpenGL Lighting.....	173
Ambient, Diffuse, and Specular Light	174
Material Colors.....	175
RGB Values for Lights and Materials	175
A Simple Example: Rendering a Lit Sphere	176
Creating Light Sources.....	180
Color.....	182
Position and Attenuation	182
Spotlights.....	184
Multiple Lights.....	186
Controlling a Light's Position and Direction	187
Selecting a Lighting Model	192
Global Ambient Light	193
Local or Infinite Viewpoint	194
Two-sided Lighting	194
Enabling Lighting.....	195
Defining Material Properties	195
Diffuse and Ambient Reflection.....	197
Specular Reflection	198
Emission.....	198
Changing Material Properties	199
The Mathematics of Lighting	205
Material Emission	206
Scaled Global Ambient Light.....	206
Contributions from Light Sources.....	206
Putting It All Together.....	208
Lighting in Color-Index Mode	209
The Mathematics of Color-Index Mode Lighting	210

6. Blending, Antialiasing, Fog, and Polygon Offset	213
Blending	214
The Source and Destination Factors	215
Sample Uses of Blending	217
A Blending Example	220
Three-Dimensional Blending with the Depth Buffer	222
Antialiasing	226
Antialiasing Points or Lines	228
Antialiasing Polygons	235
Fog	239
Using Fog	240
Fog Equations	243
Polygon Offset	247
7. Display Lists	251
Why Use Display Lists?	252
An Example of Using a Display List	253
Display-List Design Philosophy	257
Creating and Executing a Display List	259
Naming and Creating a Display List	262
What's Stored in a Display List	263
Executing a Display List	265
Hierarchical Display Lists	265
Managing Display List Indices	267
Executing Multiple Display Lists	267
Managing State Variables with Display Lists	273
Encapsulating Mode Changes	275
8. Drawing Pixels, Bitmaps, Fonts, and Images	277
Bitmaps and Fonts	279
The Current Raster Position	282
Drawing the Bitmap	283
Choosing a Color for the Bitmap	284
Fonts and Display Lists	285
Defining and Using a Complete Font	286

Images	289
Reading, Writing, and Copying Pixel Data.....	290
Imaging Pipeline.....	296
Pixel Packing and Unpacking	298
Controlling Pixel-Storage Modes.....	298
Pixel-Transfer Operations	302
Pixel Mapping	304
Magnifying, Reducing, or Flipping an Image.....	305
Reading and Drawing Pixel Rectangles	309
The Pixel Rectangle Drawing Process	309
Tips for Improving Pixel Drawing Rates.....	314
9. Texture Mapping	317
An Overview and an Example.....	321
Steps in Texture Mapping	321
A Sample Program	323
Specifying the Texture.....	326
Texture Proxy	330
Replacing All or Part of a Texture Image.....	332
One-Dimensional Textures.....	335
Using a Texture's Borders	337
Multiple Levels of Detail	338
Filtering	344
Texture Objects.....	346
Naming A Texture Object	347
Creating and Using Texture Objects	348
Cleaning Up Texture Objects	351
A Working Set of Resident Textures	351
Texture Functions	354
Assigning Texture Coordinates	357
Computing Appropriate Texture Coordinates	358
Repeating and Clamping Textures	360
Automatic Texture-Coordinate Generation	364
Creating Contours	365
Environment Mapping.....	369

Advanced Features	371
The Texture Matrix Stack	371
The q Coordinate.....	372
10. The Framebuffer	373
Buffers and Their Uses.....	376
Color Buffers	377
Clearing Buffers.....	378
Selecting Color Buffers for Writing and Reading	379
Masking Buffers.....	381
Testing and Operating on Fragments	382
Scissor Test	383
Alpha Test	384
Stencil Test.....	385
Depth Test	391
Blending, Dithering, and Logical Operations	392
The Accumulation Buffer	394
Scene Antialiasing	395
Motion Blur.....	402
Depth of Field	402
Soft Shadows	406
Jittering	407
11. Tessellators and Quadrics	409
Polygon Tessellation	410
Create a Tessellation Object.....	412
Tessellation Callback Routines	412
Tessellation Properties	417
Polygon Definition.....	423
Deleting a Tessellator Object.....	426
Tessellator Performance Tips.....	426
Describing GLU Errors.....	426
Backward Compatibility	426
Quadrics: Rendering Spheres, Cylinders, and Disks	428
Manage Quadrics Objects	429

Control Quadrics Attributes	430
Quadrics Primitives	431
12. Evaluators and NURBS	437
Prerequisites	439
Evaluators	440
One-Dimensional Evaluators	440
Two-Dimensional Evaluators	446
Using Evaluators for Textures	452
The GLU NURBS Interface	455
A Simple NURBS Example	455
Manage a NURBS Object	459
Create a NURBS Curve or Surface	462
Trim a NURBS Surface	464
13. Selection and Feedback	469
Selection	470
The Basic Steps	471
Creating the Name Stack	472
The Hit Record	474
A Selection Example	475
Picking	478
Hints for Writing a Program That Uses Selection	489
Feedback	491
The Feedback Array	493
Using Markers in Feedback Mode	494
A Feedback Example	494
14. Now That You Know	499
Error Handling	501
Which Version Am I Using?	503
Utility Library Version	504
Extensions to the Standard	505
Cheesy Translucency	506
An Easy Fade Effect	506
Object Selection Using the Back Buffer	508

Cheap Image Transformation	509
Displaying Layers	511
Antialiased Characters	512
Drawing Round Points	514
Interpolating Images	514
Making Decals	515
Drawing Filled, Concave Polygons Using the Stencil Buffer	516
Finding Interference Regions	518
Shadows	519
Hidden-Line Removal	521
Hidden-Line Removal with Polygon Offset	521
Hidden-Line Removal with the Stencil Buffer	522
Texture-Mapping Applications	523
Drawing Depth-Buffered Images	523
Dirichlet Domains	524
Life in the Stencil Buffer	526
Alternative Uses for glDrawPixels() and glCopyPixels()	527
A. Order of Operations	529
Overview	530
Geometric Operations	530
Per-Vertex Operations	531
Primitive Assembly	531
Pixel Operations	532
Texture Memory	532
Fragment Operations	533
Odds and Ends	533
B. State Variables	535
The Query Commands	536
OpenGL State Variables	537
Current Values and Associated Data	538
Vertex Array	539
Transformation	541
Coloring	542
Lighting	543

Rasterization	545
Texturing	547
Pixel Operations	549
Framebuffer Control	551
Pixels	552
Evaluators	554
Hints	555
Implementation-Dependent Values	556
Implementation-Dependent Pixel Depths	558
Miscellaneous	559
C. OpenGL and Window Systems	561
GLX: OpenGL Extension for the X Window System	562
Initialization	562
Controlling Rendering	563
GLX Prototypes	564
AGL: OpenGL Extension to the Apple Macintosh	566
Initialization	566
Rendering and Contexts	567
Error Handling	568
AGL Prototypes	568
PGL: OpenGL Extension for IBM OS/2 Warp	570
Initialization	570
Controlling Rendering	570
PGL Prototypes	572
WGL: OpenGL Extension for Microsoft Windows NT and Windows 95	574
Initialization	574
Controlling Rendering	574
WGL Prototypes	576
D. Basics of GLUT: The OpenGL Utility Toolkit	579
Initializing and Creating a Window	580
Handling Window and Input Events	581
Loading the Color Map	583
Initializing and Drawing Three-Dimensional Objects	583

Managing a Background Process	584
Running the Program	585
E. Calculating Normal Vectors	587
Finding Normals for Analytic Surfaces	588
Finding Normals from Polygonal Data	591
F. Homogeneous Coordinates and Transformation Matrices	593
Homogeneous Coordinates	594
Transforming Vertices	594
Transforming Normals	595
Transformation Matrices	595
Translation	596
Scaling	596
Rotation	596
Perspective Projection	598
Orthographic Projection	598
G. Programming Tips	599
OpenGL Correctness Tips	600
OpenGL Performance Tips	602
GLX Tips	603
H. OpenGL Invariance	605
Glossary	609
Index	629
